ENERGY

Electric Vehicle Charging

Do you want an EV charging station on your site at no cost to you?

The Maryland Clean Energy Center is currently looking for projects to include in an application for the Charging and Fueling Infrastructure Discretionary Grant Program. The grant will cover up to 80% of the cost of the EV chargers, and partners are required to provide the remaining amount as their match. Francis Energy will cover the required 20% match for organizations that select Francis as their EVSE owner and operator, providing a no-cost solution to your business. Reach out to Francis Energy by 8/7 to find out how your project can be included.
